Investment Philosophy/Asset Allocation Strategy

The Vermont Community Foundation invests its assets to foster strong support of the community's current needs while also providing resources for future generations. The Foundation intends to achieve this objective via a well diversified asset allocation strategy executed using highly capable investment managers combined with index funds.

The Foundation's portfolio was constructed with the following concepts in mind:

- Allocate the majority of the portfolio to asset classes with high long-term returns, i.e. equities/alternative asset classes
- Consistently utilize meaningful asset class diversification to achieve return objectives during a variety of economic and market conditions.
- Avoid attempts to predict short-term market behavior via market timing strategies.
- Retain world-class investment managers who are expected to out-perform index funds over most three to five year periods. In areas where the Foundation does not believe meaningful or reliable above benchmark performance is available, index strategies are used.

Current Market/Performance Commentary

Market volatility picked up during the 2nd quarter but ultimately added to the strong gains of 2019. While many seek to make sense of aggregate price changes, we believe that over short to intermediate time frames, markets merely reflect a mixture of randomness and the worst impulses of participants. This implies that one should never be surprised by that which is inherently unstable.

Nevertheless, in a low interest rate climate, it is clearly quite odd to see strong gains for both stock and bond markets (i.e. falling yields) with gains of just over 16% for global stocks and just over 6% for investment grade U.S. bonds thus far in 2019. The Foundation portfolios have benefited from this dynamic as portfolios are built with a focus on long-term structural diversification and the view that markets create opportunities one can react to rather than predict.
